DEDICATION

This textbook is dedicated to all who strive to gain a foothold in the unmanned piloting industry. If an individual is going to fly and unmanned aircraft, they ought to be able to build it, break it, and rebuild it! "

ACKNOWLEDGEMENTS

The authors acknowledge the career of Mr. Dennis P. Lott of UAS Solutions, Clinton, MS. The 650-class copter detailed in this writing is an original design by Dennis and has been taught to many individuals over the years. The authors in capturing this process sought to maintain a bit of Dennis' career efforts and philanthropy to the unmanned community.

TABLE OF CONTENTS

DEDICATION.....	ii
ACKNOWLEDGEMENTS.....	iii
LIST OF TABLES.....	vii
LIST OF FIGURES	viii
CHAPTER	
I. Simple Problems, Elegant Solutions.....	13
II. Soldering Workshop	15
Tools Required for Training:	15
Procedures in Soldering	15
III. Constructing a Copter Power Harness	16
Modify the Motor Harnesses.....	16
Fabricate ESC Harnesses	17
Fabricate XT-60 Terminal Connectors.....	19
Complete Final Power Harness	19
Battery and Terminal Configurations	21
Completing the Power Harness	24
Reset the UBEC Voltage	25
IV. Constructing the Copter Frame	27
Setting Up the Copter Arms.....	27
Mounting Motor and Feeding Wires Through Tube	29
Preparing Main Quad Frame to Mount Arms	31
Mounting Plates.....	34
Modify the Top Plate.....	34
Attaching the Sensor Mount and Battery Mount carbon Fiber Rails.....	35
Mounting ESC to Frame	36
Connect Power Harness to ESC	41
Mounting the Pixhawk to Flight Control Carriage.....	41

Mounting the Leg Brackets	44
Connecting the Power Module for the PixHawk.....	48
Mount the Telemetry.....	50
Configure the Telemetry NETID	52
Setting UP the Flight Controller before Mounting to Frame	54
PIDs = Proportional, Integral, Derivative.....	54
Initial Flight Controller Software Install via ArduPilot Mission Planner.....	54
Install Copter Firmware on Flight Controller	55
Copter Setups.....	57
Configure Tuning	58
Finalizing the Aircraft	58
Checking Motor Rotation	58
Copter Electronic Schemas.....	60
A. Aircraft Tuning	64
Field Tuning.....	66
B. Calibration Issues: Taranis and ESC/Motor Calibrations.....	68
Update SD Cards for Taranis	68
Update the Taranis Open TX Operating Software	69
Copy New SD Card Contents into the SD Card Folder.....	72
Changing to New Quad Model (Jocko as Base).....	73
Bind the Taranis to the Quad	74
Setting up Taranis Mode Switches	74
Radio Control Calibration.....	74
Radio Calibration	76
Calibrate ESC in Mission Planner.....	77
Throttle Test the Copter and Read Logs.....	78
C. Soldering Safety Tips – University of Cambridge	1
Soldering Safety	1
Soldering Iron.....	1
Solder, flux and cleaners.....	1
Lead exposure.....	1
Rosin exposure	1
Control of fumes.....	2
Electrical Safety.....	2
Fire Prevention.....	2
First Aid	2
Waste and Disposal	2
D. Error Messages and Remedies	3

	Bad Gyro Health Message.....	3
	No Link in Toughbook.....	3
E.	Reference Materials – Copter Fabrication	4
	Spring Break 2020	4
	Fabricating Battery Plate	16
	Fabricating Sensor Plate	16
F.	Reference Materials – Flight Controller Setup.....	19
	Spring Break 2020	19
	Battery Monitor Setup	28
	Fail Safe	30
	Shut Off Arming Checks	32
	AutoTune	33
	Frame Class and Type	36
	Fail Safe Modes.....	36
	Land Modes.....	36
	Motor (MOT) Modes	37
	Pilot (opposite of Land).....	37
	Checking setup.....	39
